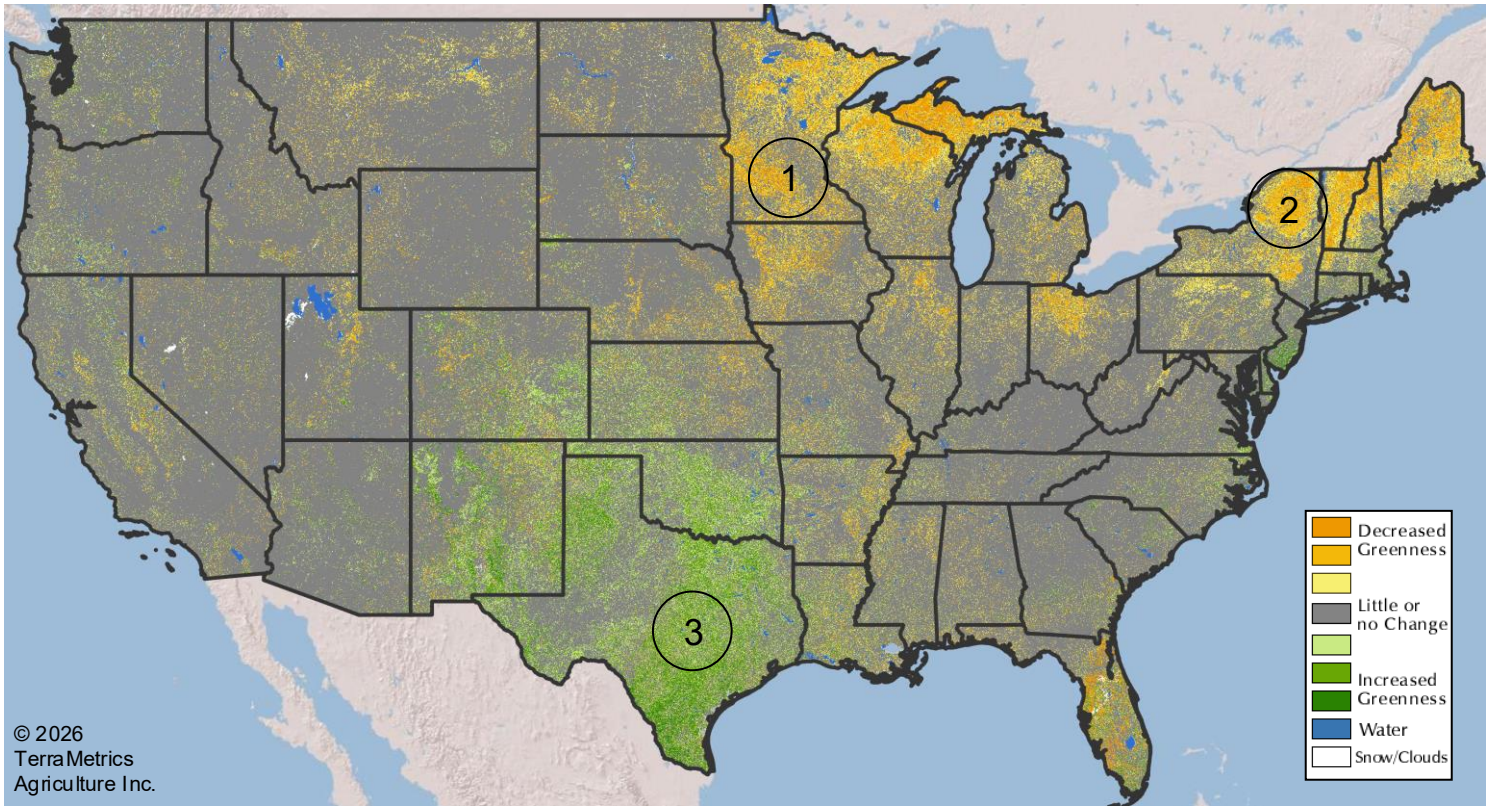
GREENREPORT®

Normalized Differential Vegetation Index | Period 41, September 28 - October 12, 2026

Highlights… Changes Since Last Week

Issued: October 14, 2026



1. In the Upper Midwest, corn and soybean harvest progress remains slightly behind the five-year average due to slower grain dry-down and recent wet weather.
2. Decreased greenness is evident across portions of the Northeast and Upper Midwest, reflecting seasonal vegetation senescence as fall foliage reaches peak color or progresses beyond peak conditions.
3. Heavy rainfall, fueled in part by the remnants of tropical systems, swept through parts of Texas over the past week, helping to improve ongoing drought conditions.
4. Increased greenness in the Northern and Central Plains reflects the combined effects of recent precipitation and the influence of El Niño, which has brought warmer-than-normal conditions relative to seasonal averages.

GREENREPORT®

Normalized Differential Vegetation Index | Period 41, September 28 - October 12, 2026

USDA CROP CONDITIONS
Week of October 12, 2026

The tables below contain crop condition percentages from the most recent state-level USDA crop progress reports released 10/13/26 for the top-10 corn and soybean states. **For comparison, numbers from last week (10/5/26) are shown in parentheses**.

"Historic Rank" was determined by compiling nearby condition rating since the mid-1980s and evaluating how the latest 2026 condition ratings stack up.

USDA CORN CROP CONDITIONS

State	VP-P	F	G-E	Historic Rank*
IA	9 (9)	20 (19)	71 (72)	20 (21)
IL	11 (12)	29 (30)	60 (58)	17 (17)
NE	20 (21)	32 (33)	48 (46)	8 (8)
MN	13 (13)	26 (27)	61 (60)	17 (15)
IN	9 (10)	27 (29)	64 (61)	21 (19)
SD	31 (31)	34 (34)	35 (35)	5 (5)
KS	34 (34)	26 (26)	40 (40)	7 (8)
